ANSWERS

2023

6	(a)	1 mark for each row						4 (AO3 2a)	No mark if more than 1 tick on a row.
		Variable	Boolean	Char	String	Integer	Real		Allow other indications of choice (e.g. cross) as
		UserName		-	✓				long as clear.
		EmergencyPhone			✓				ising as sical.
		DoorSensor	√				\vdash		
		DoorTime				✓	ш		
6	(b)	1 mark each: • Attempt at usir	na selectio	n / con	dition co	ontrolled I	oop	4 (AO3 2b)	Selection could be done using IF statement, case statement or any other sensible valid method.
		 Checking if sys 	-						•
		If Door Sensor							Allow reference to AlarmActivated or
		checks require					(equivalent instead of SystemArmed
		 calling SoundA 		ectly					
		,							Ignore any inputs or modification of variables.
									Allow True / False as strings. Allow checking
									<pre>against strings (e.g. if SystemArmed == "active")</pre>
									Allow checking armed/disarmed for BP2 and BP3
									Only award BP4 if SoundAlarm correctly called / not called in every situation. If issues on previous lines (e.g. lack of brackets where needed) means this is not the case, do not award BP4. Checking could be done by evaluating variable directly (if SystemArmed) or by comparison (if SystemArmed == True)
									Example answer 1
									<pre>if SystemArmed then if DoorSensorActive then SoundAlarm() else if WindowSensorActive then SoundAlarm() endif endif</pre>
									Example answer 2
									while SystemArmed then if DoorSensorActive then SoundAlarm() else if WindowSensorActive then SoundAlarm() endif endif
									if SystemArmed and (DoorSensorArmed or WindowSensor) then

					SoundAlarm() endif Note - above example needs brackets, if SystemArmed and DoorSensorArmed or WindowSensor then
					is not logically valid for this scenario (will sound alarm when not armed if window sensor is active) Example answer 4 if SystemArmed and DoorSensorArmed
6	(c)	(i)	1 mark for	1 (100.4)	endif
L			• Line 04	(AO3 1)	
6	(c)	(ii)	<pre>1 mark from • sensorType • sensorNumber • sensorID</pre>	1 (AO3 1)	Do not penalise case, spacing or minor misspellings.
6	(c)	(iii)	1 mark for	1 (AO3 1)	Ignore minor misspelling.
			Boolean	(AOS 1)	Accept Bool.
6	(c)	(iv)	1 mark from	1 (AO3 1)	
6	(c)	(v)	1 mark each • Selection	2 (AO3 1)	Ignore minor spelling errors / differences
	(4)		Sequence		Do not accept examples (e.g. IF)
6	(d)		<pre>1 mark each</pre>	3 (AO3 2c)	Max 2 if out of order or anything extra that affects the output. BP1 can select multiple fields as long as SensorID is included. Ignore case. Only penalise spaces if obvious. Field names must be correct. "door" must be in quotation marks for BP3. Allow quotation marks for field names and table name BP3 can use == or = for equivalence. Allow alternative WHERE clauses that are logically correct (e.g. WHERE length >=21)

6	(e)		Define procedure SaveLogs with two valid parameters Open file (for write/append) using the file name passed in as parameter Write data to file using the data passed in as parameter Close file	6 (AO3 2b)	Must be clear that answer is a procedure definition, do not credit calling procedure for BP1. Allow function definition. If parameters are later overwritten, do not credit BP2 but FT for BP4 and 6. Closing text file does not need reference to file name/object – e.g. "close file" is enough. However, if given reference must be correct. If code given outside of procedure, do not give BP4 and BP6 Allow FT for multiple occurrences of same mistake (e.g. not using filename correctly for open and close) Example answer procedure SaveLogs (data, filename) logFile = open (filename) logFile.close() endprocedure
6	(f)	(i)	1 mark for: • Casting / cast	1 (AO3 2a)	Accept type casting Do not accept conversion. Do not accept examples of casting.
6	(f)	(ii)	Input date and store in variable / use directly Access all seven (indexes 0 to 6) events in array // loop for each event in array Attempt at selectionto compare date input against date in array (element 0)adding length (element 3) from array to the total if dates match. Outputting calculated total and date in appropriate	6 (AO3 2b)	BP2 can be achieved either by iteration accessing each event or manually repeating code to access each event. Must be 0 to 6, not 1 to 7. Allow reference to events (table given) or arrayEvents (2D array) in answer as long as used consistently. BP2 loop allow off by one errors (Python), looping to array length or array length - 1. Allow for each item in array or any other suitable

events on " + date)

2022

-								- 1	N
1	(a)		1 mark per correct row				(A021		No mark given if both boxes in a row ticked.
			OCR Reference Language code	Selection	Iteration				Accept any response (ticks, crosses, etc) that clearly indicates candidate's choice.
			for i = 1 to 10 print(i) next i		~				
			whilescore != 0 playgame() endwhile		~				
			if playerHit() then score = score - 1 endif	~					
			switch bonus: case 0: score = 9 case 1: score = 7 case 2: score = 5 endswitch	*					
1	(b)		• score = score + 1 // sco	ore +=1 //	score++		(AO3 2	b) i	Allow other logically correct answers that result in score increasing by one and being overwritten. Do not accept score + 1 / score = +1
								i i	Accept valid structured English answers that refer to score increasing and overwriting the existing value by one. e.g. "score becomes/equals score plus one"
									Ignore any superfluous code that does not affect the outcome
2	(d)	(i)	Convert/change one data ty Line 03 // 3 // three	pe to another	r	(AO1 1) AO2 21	b, but		ccept "change to string" – this is the use in this example definition.
4	(b)	(i)	Multiplication Division				2 (AO1 1a) A	ccept other correct answers that mean the same ccept floor / integer division // division with no emainder (Python v2.x)
5	(a)	(i)	Integer String			2 (AO3 2a)	Accept short fo		r valid data types from high-level languages (e.g. byte, egers)
									pt descriptions (e.g. "whole number", "text"). Do not racter(s)" for string.
5	(a)	(ii)	stayComplete			1 (AO3 2a)	Ignore	space	es or misspelling as long as recognisable.
5	(a)	(iii)	SELECT FirstName, Surname, Nights, Room, StayComplete # SELECT *			4 (A03 1, A03 2c)			ds for BP1 not important but must show all fields and d by commas.
		 FROM TblBookings WHERE Nights > 1 // Nights >= 2 // Nights 		hts	4			alisation and spacing. Spelling must be correct. Ignore nd numeric values or field/table names.	
			BETWEEN 2 AND 5				Allow o		logically valid SQL statements. Check with TL if
									ence to stayComplete or other valid SQL code that flect output.
							Max 3	if in w	vrong order or if includes any extra invalid code

5	(c)	(ii)	Function header for newPricetaking (at least) two parameterscorrectly calculates price based on parameters (if present) within functionreturns this calculated price Call function newPricewith ("premium", 5) as parametersOutput returned value	4 (AO3 2b)	BP1 must be clear that a new function is being defined. E.g. function / def keyword. Allow FT for subsequent marks if not present. Ignore any code outside attempt at function definition. Ignore additional parameters. Ignore inputs or additional code as long as these do not overwrite parameters or affect operation of function. If inputs used instead of parameters, FT for BP3. Allow use of else for second room type in BP3. Attempt at calculation needed to award BP4. Must return (not output) value. Return can be done e.g. in VB by assigning to function name (e.g. newPrice = price) e.g. function newPrice(nights, room) if room == "basic" then price = 60 * nights elseif room == "premiun" then price = 80 * nights endif return price endfunction Order of parameters not important "premium" must use string delimiters (e.g. "quotes") e.g. print (newPrice("premium", 5)) x = newPrice(5, "premium") print(x) Do not allow function definitions for BP1 Ignore capitalisation of newPrice Candidate could store returned value in a variable and then print this, or store parameters in variables before passing in – these are all acceptable Ignore any superfluous code given Do not credit answers where newPrice is overwritten prior to use.
					Ignore spaces. Allow function call if brackets missing (e.g. newprice instead of newprice())
5	(d)		For loop changed to include 0 total = 0 moved to before loop starts / removed	2 (A03 2c)	Allow loop changed to 0 to 8 or 0 to 9 (Python) Do not accept moving total outside loop, NE (could be moved to after loop which would still be a logic error). Do not accept move to top of loop. Accept corrected code shown. Accept reference to count variable limits for BP1.

3			SELECT StudentName, Subject, Grade	1 (401.45)	Correct Answer Only
			FROM Results WASTER CONTRACT	(AO1 1b) 2	Accept SELECT *
			WHERE Subject = "Art"	(AO3 2a)	
7	b		radius area	2 (AO1 1b)	1 mark per bullet up to a maximum of 2 marks.
	С	i	• 3.142	1	1 mark for one correct identification.
			• 2	(AO2 1a)	
			• 1 • 30		
	С	ii	The number does not need to be changed while the	1	Maximum of 1 mark.
			program is running	(AO1 1a)	
			 The number can be updated once and it updates throughout 		
	d		HAS been used	3	
			HAS been used	AO2 1b	
8	а		HAS NOT been used Integer (1)	1	One mark for appropriate data type identified.
				(AO3 2a)	
			number of seconds not important (1) level of accuracy not needed so round to nearest	(AO3 1)	One mark for appropriate justification linked to the data type chosen.
			minute (1)	(7.00 1)	Who arranged
			using a decimal to store seconds (0-60) is not		
			appropriate (1)		
			Real (1) number of seconds may be important (1)		
			named of accorded thay are important (1)		
			allows parts/fractions to be stored over integers (1)		
8	С		print (minsPlayed[0,4])	1 (AO3 2b)	High-level programming language / OCR Exam Reference Language response required
					Do not accept pseudocode / natural English.
					print may be a suitable output command word that
					could be found in a HLL e.g. print (Python),
					console.writeline (VB), cout (C++)
					The array elements may be accessed together [0, 4]
_					(VB.NET) or separately [0] [4] (Python)
В	d		 Initialises total as 0 <u>and</u> prints out total the end (as per original program) 	4 (AO3 2c)	High-level programming language / OCR Exam Reference Language response required
			Uses iteration, e.g. FOR, WHILE	(,	
			that repeats 5 times		Do not accept pseudocode / natural English.
			correctly adds up values using loop index		MP1 must have appropriate identifier, = and then the
			e.g.		numeric 0 MP2 must have for or while
			total = 0		MP3 must have the for stopping condition 4/5
			for x = 0 to 4 total = total + hoursplayed[2, x]		MP4 must have the same identifier for MP1 and equal and + to add the data in the array (using either [x,y]
			next x		or [x] [y]. This could be total = total + Or
			console.writeline(total)		total +=
			e.g.		
			total = 0 for x in range (0, 4)		
			total += hoursplayed[2][x]		
			next x		
			print (total)		l

g	ii	Program calls function correctly using hours and minutes variables Parameters used appropriately Calculation is computed accurately Final total is returned suitably Program calls function correctly using hours and minutes variables Final total is computed accurately	4 (AO3 2a)	hours = input("Please enter number of hours played") minutes = input("Please enter number of minutes played") finalTotal = totalMins(hours, minutes) print (finalTotal) function totalMins(hours,minutes) total = (hours * 60) + mins return total endfunction 1. Parameters named in function must be used within the function itself 2. Does not matter if function uses different names to those declared in main program 3. Return must be included with the correct local

	(b)	(i)	Number with a decimal / fractional part Suitable example (e.g. 17.24)		2	One mark for definition, one mark for example Do not accept float as definition Allow fractions as example				
		(ii)	1	fractional	umber // number with no dec I part example (e.g. 17)	imal /	2	Or	ne mark for definition, one mark for example	
Ī	(b)	(i)	•	16			1			
Ī		(ii)	•	2			1	T		
Ī		(iii)		9			1	T		
Ī	(c)	(i)	•	second	.substring(3,5)		1		Ignore print / lack of print. Allow other suitable methods of string manipulation as long as variables used.	
									Allow any valid method that extracts rightmost 5 or 6 characters of second variable.	
Ī		(ii)		first.sub	ostring(0,8)		1		Ignore print / lack of print. Allow other suitable methods of string manipulation as long as variables used.	
									Allow any valid method that extracts leftmost 8 or 9 characters of first variable.	
		(iii)	i) • first.substring(9,7) + " " + second • "Science " + second • first.substring(9,7) + " is great"		1		Ignore print / lack of print. Allow other suitable methods of string manipulation as long as variables(s) used.			
								- 1	Allow alternative concatenation symbols (e.g. & or .). Allow concatenation functions	
1	T	(a)			Function call	Returned value	Т	3	Must have correct spacing in outcome. Do not accept "blank" or any other returned value for third call. Ignore case and spelling as long as recognisable.	Ţ
					checkblock(2,1)	В			ignore case and spening as long as recognisable.	
					checkblock(3,0)	A	╢			
					checkblock(2,3)	FREE	╝			
	T	(b)		• Re	turns a value // passes back	a value		1		-
	Ī	(c)	(i)		rameter values outside index smaller than 0 // -1, 16 is not		٦	1	Answer must refer to either array or gameboard / grid / block	•
	T	\neg	(ii)		e selection / IF / Switch-Case theck that parameters are >=		T	3	Allow equivalent checks (e.g. <5, between 0 and 4) for BP2 Allow reference to x and c as parameters.	-
			Return error code if invalid // set outcome to error		or		BOD handle error for BP3 (e.g. repeat until valid) Answer must be a description, code by itself is NAQ			
	Ī	(d)			ut two position values separa s checkblock() function		\top	6	If flowchart / structured English, do not allow simple repeat of question.	•
					vith input parameters returned value used in select	tion			Example answer loop = True	
				 If fr 	ree, stores "A" to correct inde	x of gamegrid			while loop row = input("enter row")	
		array (FT for incorrect selection) Loops until free position chosen				<pre>col = input("enter column")</pre>				
									if checkblock(row,col) == "FREE" then gamegrid[row,col] = "A"	
									loop = False endif	ļ
									endwhile	

1	(a)		1 mark for each letter Decomposition Abstraction Input Sanitisation Casting	D B A F	4 AO1 1a(4	
1	(b)	(i)	• timer = 7.3		1 AO3 2b(1	add types.
1	(b)	(ii)	Real // Float		1 AO2 1b(1	
3	(b)	(i)	• money • price		1 AO1 1b(1)	Must be an identifier, not description. Ignore case.
3	(b)	(ii)	• one		1	
3	e		• SELECT Ite • FROM ITEMS • WHERE •Stock < 1		4 AO3 2b(4)	Accept other fields shown in addition to ItemCode Accept Stock <=9 / etc. Ignore case. Spelling of fields and table must be correct. If WHERE missing, Stock < 10 must be after FROM clause.
3	f		 if so, assig Correct assig "suspended" 	It value is "on" In 1 to statevalue Inment of 2 for "off" and 3 for I' with correct state and IF II check (else) to output "invalid	5 AO3 2b(5)	Accept alternative error messages. Variable names must not include obvious spaces. BP3 dependent on BP2. BP2 and BP4 must be a logical comparison using IF and not just the CASE statement. NE to simply replace CASE with IF. Penalise each error once then apply FT. e.g. newstate = input ("Enter the new state:") if newstate == "on" then statevalue = 1 elseif newstate = "off" then statevalue = 2 elseif newstate = "suspended" statevalue = 3 else print ("Invalid state") endif
4	(d)	(i)	• 3		1 AO1	CAO
4	(d)	(ii)	• 1		1b(1)	CAO
_	(3)	(,			AO1 1b(1)	

6	(c)	Use of iteration (any use)loops for each item in array // loops 6 timesto print out each item in studentnamesinput attendance Add up/calculate students present and absentOutputs present and absent (in suitable message)	6 AO3 2b(6)	BP 2 and 3 may be met together with suitable input statement. Both dependent on attempt at iteration. BP5 not dependent on correct previous parts. BP6 needs reasonable attempt at totalling present and absent figures. Ignore non-initialisation of counter variables. Flowcharts are acceptable but must show how to solve the problem, not simply repeat the question.
				<pre>Example algorithm present=0 absent=0 for i = 0 to (studentnames.length) -1 print(studentnames[i]) attendance=input("absent or present?") if attendance="present" then present=present+1 else absent=absent+1 endif next i print ("Present students: " + present) print ("Absent students: " + absent)</pre>

2019

4	(c)		1 mark per bullet to max 3	3	Correct answer only.
			• count • = nogoalscount + 1 • nogoalscount	AO3 2b (3)	Accept alternatives to adding 1 to variable (e.g. += 1 ++) Penalise spelling once only, FT for further mistakes. Do not penalise case.
5	(c)		• 9	1 AO1 1b (1)	Accept sensible messages printed out alongside nogoalscount Correct answer only Do not accept 32 or 3 x 3
6	(a)	(1)	Function ticketprice() defined that accepts two parameters and has no other inputs Works out total ticket price for adult (eg adult * 19.99) Works out total ticket price for children (eg child * 8.99) Adds on correct booking fee Returns the calculated value.	6 AO3 2b (6)	Bullet points 3, 4, 5 can be awarded even if no mention a function / parameters (for example, if candidate has inputted the number of tickets needed. Do not award return value if no attempt at a function. Return mark can be given if a good attempt made at calculating the total, even if this is incorrect. Allow 2.50 booking fee to be per order or per ticket Ticket prices must be stored appropriately if needed. example algorithm function ticketprice (numadult, numchild) price = (numadult * 19.99) + (numchil) * 8.99) + 2.50 return price end function Allow alternatives in high level languages (e.g. def in Python). Allow return as assigning the value to the name of the function (VB syntax)
6	(a)	(ii)	Real Returned value may not be a whole number / may have a decimal point in	AO2 1a (1) AO2 1b (1)	Allow String only if matching justification shows understanding (e.g. £ sign attached, message returned alongside value).

2018

1	String Integer / Int Boolean		3	Accept text / varchar for string. Do not accept character. Do not accept number/numeric for integer Accept yes/no, true/false for Boolean.	
1	(b) (i)		mark per bullet, max 2 if not in correct order or additional statements given. SELECT StudentName FROM conduct WHERE Points < 0	3	Capitalisation does not affect the mark. Spellings of fields, tables must be correct. Ignore brackets. Ignore quotes around StudentName, Conduct or Points. Mark quotes around 0 in WHERE clause as incorrect. StudentName must not include space Accept <= -1 or equivalent for 3 rd bullet point.
1	(b)	(ii)	* / star / asterisk	1	Wildcard (*) must be clearly identified as the answer. Do not allow any other SQL statements alongside this unless this is given as an example.
1	(c)		Selection(IF) used Comparing studentdata[3] with "TRUE" or "FALSE" // TRUE or FALSE Correct outputs ("sent" and "not sent")		if studentdata[3] == "TRUE" then print "sent" else print "not sent" end if Bullet point 3 can only be awarded If an attempt is made at identifying studentdata (e.g. with the wrong index or no index). Do not allow simply comparing anything with True / False. Bullet point 3 can be implicit.
2	(a)	(i)	• 2, 3, 4	1	All three numbers needed in the correct order (with no other numbers) for mark.
2	(a)	(ii)	• 15	1	Accept 3 x 5
2	(b)		mark per bullet, max 2 Sequence Iteration / loops / repetition	2	Ignore spelling. Do not allow examples (eg FOR loop / WHILE loop)
2	(c)	(i)	A (name/identifier for a) memory location used to (temporarily) holds/contains/stores data / value // is assigned a value that can be changed / possible to change (while the program is running)	2	Do not accept "will change" for bullet point 4. Do not allow "holds/stores <u>something</u> " or "holds/stores <u>information</u> " for bullet point 2. Do not accept name / identifier without reference to a memory location. Do not accept "a value given a name" or equivalent.
2	(c)	(c) (ii) 1 mark per bullet, max 2 • k • p • m		2	Ignore capitalisation. Correct answer only. Do not allow other code in answer.

_					
4	(a)	(ii)	1 mark per filled gap, max 3 01 function librarycode (title, year) 02 parta = title.substring (0, 3) 03 partb = year.substring (2, 2) 04 return parta.upper + partb 05 endfunction 1 mark per bullet, max 6 Input title and year from user Open bookcodes.txt Call the librarycode() function with the two parameters that match input values write out code obtained to the text file Close text file	6	Ignore capitalisation. Allow Iibrarycode = for 3 rd mark - this is an equivalent in some languages for returning a value (eg. Visual Basic). Example algorithm title = input ("enter title") year = input ("enter year") code = librarycode(title, year) myFile = openWrite("bookcodes.txt") myFile.writeLine(code) MyFile.close()
			- Older real file		Note, pseudocode shown above is an example – candidates may answer very differently, but award marks if intention can be seen. Bullet points 3,4 and 5 could be done in one line: myFile.writeLine(librarycode(title, year)) Do not award bullet point 3 if candidate is defining the function rather than calling it. Allow bullet point 2 (opening text file) if correctly referred to during write operation. Bullet point 3 must include brackets () to signify it is the function being called or indication that is being called.
4	(b)	(i) (ii)	I mark per bullet, max 2. Function returns a value Procedure does not return a value I mark per bullet, max 4. Mark in pairs. e.g. Breaks down / decomposes / modularises the problem / program // structures the program making it easier to design/create/test each subroutine can be tested separately Reuse code (in different programs) quicker to develop (new) programs build on existing work / use of a library of subroutines Avoid repetition of code (in the same program) makes program shorter / smaller subprogram called instead of copying/pasting. quicker to develop (new) programs Easier to maintain as code is easier to understand/read as code is shorter Easier to debug as code is shorter Easier to debug as code is shorter Work can be split up in a team to suit developers' skill set to work on different subprogram at the same time /	4	Allow "does not" for second mark if intention is clear (ie if it is obvious that the "not" refers to not returning a value). Allow discussion of how returned value in a function can be used (e.g. to assign to a variable or to use this returned value in some way). Maximum of two benefits with expansions to be marked as per question. Allow other sensible expansions. Allow expansions which cross over to other benefits (e.g. breaks down the problem / to make it easier to maintain). Allow "can be called multiple times" Allow "file size is smaller". Do not allow "more efficient" without further explanation.
			Allows for abstraction / removes complexity subprograms can be used by programmers who do not need to understand how they work.		

6	(a)		Will loop infinitely loop infinitely	4	1 mark per row. More than one tick in a row = 0 marks for that row.
6	(b)		1 mark per bullet, max 3.	3	Example algorithm
			FOR loop used That outputs the counter variable loops 10 time		for i = 1 to 10 print i next
					Do not accept WHILE loop for first mark, although other marks can be accessed.
					No need for next
					If candidate manually increments counter within FOR loop, do not award bullet point 3.
					Accept pseudocode that suggests looping 10 times, even if this may not function correctly in a specific language.
7	(a)	(i)	1 mark per bullet, max 2. • else	2	Accept logically correct equivalents for else (e.g. elseif a!="LAN" and/or a !="NAN"). Do not allow elseif on its own
			• print ("unknown")		Accept other keywords for print (e.g. "output") as long as the intention is clear.
					Accept other messages as equivalent to "uknown" (e.g. "not known" / "error"))
					Message to be printed must be in quotes.
	4	20	17		Allow "else then".

2017

3	a		1 mark for each pseudocode statement	2	Ignore capitalisation.
			Total = Total + NumberArray(Count) Mean = Total/Quantity or Mean = Total/Count or Mean = Total/10		Accept any correct symbol or structured English meaning division for mean calculation. Accept mean calculations that refer to 11 numbers: e.g. • Total/11 • Total/(Count+1) • Total/(Quantity+1)
3	ь		1 mark per bullet, max 2 for definition, 1 for example Definition:	3	O marks for "stays the same" / "does not change". Must have the idea that it cannot / is impossible to change. Correct answer only ("Quantity") for the example. Do not accept other surrounding code (eg "Const Quantity = 10" is incorrect). Do not accept incorrect spellings. Ignore capitalisation.
3	С		mark for data type, 1 for justification Data type: Real/Float/Single/Double/Decimal Justification: can be decimal/fractional/not a whole number	2	Do not accept "a constant is a variable that" If candidate uses "decimal" as data type, do not accept "can be decimal" for the justification. Do not award justification if data type is incorrect.
3	d	i	mark per bullet, to max 2 A construct Code is executed/run repeatedly//is looped Until a condition is met/while a condition is true/a set number of times	2	Do not accept only an example (eg "for loop").
3	d	ii	While/do while Repeat/ Repeat until/do until/ Until	2	Do not accept "do loop".

4	a	Sequence	1	
4	b	A location in <u>memory</u> The <u>value/contents cannot</u> be changed (whilst the program is running)	2	0 mark for "a variable that does not change" 0 marks for "stays the same"
4	С	numberOfPages = numberOfPages+numberOfChapters	1	Accept:
4	d	Integer/Int It is a whole number/you can't have half a word	2	Do not allow 'need to ignore the decimal' Cannot get reason if data type incorrect
4 9	e	• String (name) • Real/Single/Double/Currency/Float/(Decimal) (price) 1 mark per bullet • Taking the move as input • Checking if array element input is free • oOutputting if it is taken • Writing 'A' to the correct array element • Counting how many free space there are • oOutputting the number of free spaces (if good attempt at counting free spaces) e.g. INPUT move IF numbers (move) = "" then numbers (move) = "A" ELSE • output "taken" ENDIF free = 0 FOR x = 0 TO 100 IF numbers(x) = "" then free = free + 1 ENDIF NEXT x OUTPUT free e.g. INPUT move IF numbers (move) = "" then numbers (move) = "A" numbers (move) = "A" numberFree = numberFree - 1 ELSE output "taken" ENDIF OUTPUT numberfree	6	The output mark can only be awarded if a reasonable attempt at adding the free spaces have been performed Counting how many free spaces there are can be done by either: • Looping through each element of the array and updating a variable if free/taken • Subtracting 1 each time an element is taken (this must work, i.e. there is no initialisation of the variable e.g. to 101, as that would run every time and reset the variable). If Initialisation is used, this must be outside a loop and must be 101.

10	а	Lidia	1	Accept incorrect spelling if intention is clear.
	b	 Program finds there is no position 7 in the array / array index out of bounds An error will occur / an error message would be displayed / program will crash 	2	Only award bullet 1 if answer is clearly about the contents of the array and not about the context. Do not award bullet 2 if candidate specifically mentions syntax error.
	c	Example INPUT Num For i = 1 to Num Temp = PlayerName(6) PlayerName(6) = PlayerName(5) PlayerName(5) = PlayerName(4) PlayerName(4) = PlayerName(3) PlayerName(3) = PlayerName(2) PlayerName(2) = PlayerName(1) PlayerName(1) = Temp Next i Award marks for: Input the number of places to move (e.g. Num) Use of temporary variable(s) or second array to avoid overwriting values in the array Sensible use of a loop Insult the number of places to move (e.g. Num) Correctly deals with moving from position 1 (e.g. 1 + Num) Correctly deals with moving from position 6 (e.g. Num)	6	If there is more than one loop, award bullets 3 and 4 for any non-trivial loop that contributes to the solution. For bullet 3, "sensible" use of a loop, requires that the loop clearly address the problem (e.g. move every player from pos a to b). Although candidates can get partial marks here, candidates will only get full marks (incl bullet 6) if all conditions of all loops are correct.

EXTRA

5		i	 Defined within one module accessible only in that module / An mention of scope Can be used as parameters Data is lost at end of module Same variable name can be used in other modules without overwriting values/causing errors Can overwrite global variables (with the same name) 		4		For module allow procedure / function / subroutine / block of code Examiner's Comments Well answered by most candidates.
		ii	Defined at start of program Exists throughout program / in all modules Allows data to be shared by modules		2		Examiner's Comments Nearly all candidates were able to get at least one mark on this.
13	а		Iteration [1]	1 AO2 (1)			miner's Comment: Il answered by most candidates.
	b		It does not return a value [1]	1 AO2 (1)		A no	nminer's Comment: umber of candidates clearly did not preciate how functions differ from cedures.
8			 Selection / Branching (1) (AO1.1) Working selection example (1) (AO1.2) e.g. if a>b then	6		Do inot psei Exa The itera iden con: faile required such can con:	not penalise pseudocode if it is does conform to the specification udocode guidelines. Iminer's Comments Is programming constructs of sequence, ation and branching are specifically ntified within the specification. Many didates were unaware of these named structs. Of those who were, many then ed to give a working example as uired by the question, but went on to cribe rather than exemplify. Reponses h as looping were too vague as didates are expected to know the rect technical vocabulary at AS Level.

18		 Global variable is visible throughout a program / may be accessed from more than one part of the program (1), local variable is visible only in module / construct where it is created / declared (1). 	2	Up to 2 marks for a valid description.
		Total	2	
19		 A function is a named section of program (1) that performs a specific task (1). It returns a value (1), it is often called inline (1). 	2	Up to 2 marks for a valid description.
